

Healthy Volunteers Over the Age of 18 Needed For Research

Bariatric surgery leads to many changes in the body, with unknown changes in skin and skin fat. In this study, we are evaluating the impact of bariatric surgery on changes in skin related to weight loss. Cells will be obtained to study effects of weight loss on the skin.

Who Can Join This Research Study?

- Healthy participants over the age of 18 years who are planning to undergo bariatric surgery

Participation Involves:

- Up to 4 study visits with whole body photography, non-invasive imaging, and skin biopsies

Time Needed for Research Study:

- Up to 6 ½ months

For more information, contact the JHUSOM Cutaneous Translational Research Program (CTReP)
