

## Healthy Volunteers Over the Age of 18 Needed For Research

Hormone replacement therapy (HRT) leads to notable changes in the body, but many changes in body tissues are not well understood. In this study, we are creating a Transgender and Gender Diverse (TGD) Patient Database and Biorepository. We are currently looking for volunteers who are receiving HRT and are willing to donate tissue samples.

### **Who Can Join This Research Study?**

- Healthy participants over the age of 18 years who are receiving HRT

### **Participation Involves:**

- 1 study visit with donation of tissue samples (skin biopsies, blood, skin swabs, stool, cheek swabs, tape stripping, hair, and/or nail samples)

### **Time Needed for Research Study:**

- 1 in-person study visit

### **Compensation:**

- \$20 each per blood draw, stool sample, and skin biopsy
