

Recently  
diagnosed with  
**TYPE 1  
DIABETES?**

Consider taking part in the **DIAGNODE-3** research study for adolescents and adults (aged 12 to 29 years old).

## Who Can Participate?

You may be eligible to participate in this clinical research study if you/your child:

- Are 12 to 28 years of age,
- Have been diagnosed with type 1 diabetes within the last 6 months,
- Have the HLA DR3-DQ2 haplotype (all participants will be tested as part of the study).

The study team will be looking at additional criteria to confirm eligibility for the study.

## What to Expect?

The study will last about 26 months and requires up to 11 study visits as well as follow-up phone calls.
