

Is your child the last one to finish things? Slow to complete any activity, even those that do not involve homework or chores?

ATTENTION: Parents of Children 6 to 11 years old!

We are recruiting participants for a research study to understand how children described by their parents as moving or working much more slowly than others their age concentrate and pay attention. We hope to learn about the work style of these children, including whether this slower performance is associated with other differences in their thinking or attention skills.

- Who:** CHILDREN who work *more slowly* than their siblings or peers
- What:** Online screening at bit.ly/SlowMovingKids
If eligible, telephone interview and 1 visit to KKI (lasting about 2 hours) to complete attention, language, and behavioral tests
- Where:** Kennedy Krieger Institute in Baltimore, Maryland
- Benefit:** There are no medical benefits or significant risks, but you will receive a brief report of your child's testing results.
- Compensation:** \$25.00 at completion of testing
- Contact:** For questions, call Elizabeth Offermann at (443) 923-4476

Every child is born with great potential.
Shouldn't every child have the chance to achieve it?
