

Johns Hopkins Pediatric Radiology COVID-19 Safety Guidelines

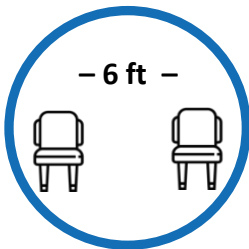

Your safety is our number one priority

At Johns Hopkins, we have taken multiple steps to make sure your MRI exam goes safely and smoothly. As part of our new safety measures, you might see staff wearing different types of masks or other protective items.

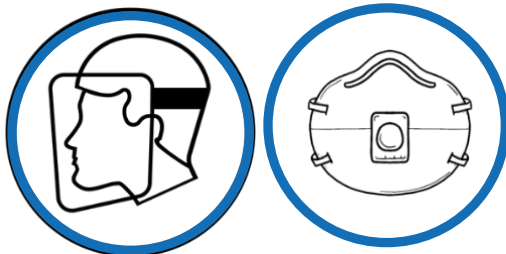

Below is a short summary to share with your child, for more information, please visit www.hopkinschildrens.org/covid-19.

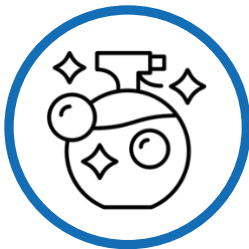

In the hallways and waiting room areas, you'll see patients and staff wearing cloth or surgical masks, just like you!

Our waiting rooms are spaced further apart for social distancing. The new, temporary visitor's policy is that only one parent can accompany their child.

During your MRI exam, you might see staff wearing face shields or different types of masks. This is an extra layer of protection for hospital workers.

We carefully clean all the equipment before and after every patient. We use special cleaning products to make sure everything is properly sanitized.

If your child's MRI is scheduled with Mollie Young, our child life specialist, and you have any additional questions, please email her at myoung49@jhmi.edu.
